

Continuation of growth: FACC increases earnings and revenue in Q1 2026 – strategic milestones underline positive development

- *Revenue up 11.8% to EUR 258.2 million in Q1 2026 (prior-year period: EUR 231 million)*
- *Operating profit (EBIT) more than doubled to EUR 9.7 million in the reporting period (prior-year period: EUR 4.3 million | +125.6%)*
- *Headcount grows to 4,017 FTE (Q1 2025: 3,896 FTE)*

FACC AG consistently continued its growth course in the 2026 financial year and was able to significantly increase both revenue and earnings in the first quarter. Revenue increased by 11.8% to EUR 258.2 million (prior-year period: EUR 231 million). The operating result (EBIT) more than doubled to EUR 9.7 million (Q1 2025: EUR 4.3 million | +125.6%). All divisions developed positively. The number of employees grew to 4,017 FTE (Q1 2025: 3,896 FTE).

Despite this positive development, the market environment remains dynamic. Disruptions in international supply chains as well as high material and personnel costs remain challenging. The conflict in Iran, which has been ongoing since the end of February, also led to an increased need for coordination with global customers in the first quarter – necessary adjustments were, however, in line with FACC management's expectations for the company's development in the 2026 financial year.

FACC sets strategic milestones: In addition to its successful operational performance, FACC achieved several strategic milestones in the first quarter of 2026. These include, in particular, the decision to expand production capacity in Upper Austria by building a new plant. The investment volume amounts to around EUR 120 million and represents an important step towards securing the long-term growth course.

Furthermore, FACC secured a new cabin contract from Brazilian aircraft manufacturer Embraer, thereby further expanding the existing partnership. FACC was also named "Supplier of the Year" by Embraer for the third consecutive year – a confirmation of FACC's high performance and quality along the entire value chain.

Civil aviation industry remains on growth path: The global aviation industry shows overall robustness as well in 2026. Continued high demand, with a global order backlog of over 17,700 aircraft, is leading to rising production rates at manufacturers and supporting the positive development across all major programs. In particular, the short- and medium-haul segment as well as rising rates for long-haul platforms are driving growth in the entire industry. With its international customer network and diversified product portfolio, FACC is benefiting from these developments.

Unchanged from 2023 to 2025, the industry continues to be characterized by volatility. Alongside challenges in global supply chains, geopolitical tensions – especially in connection with the Iran conflict – are attracting maximum attention. The Iran crisis is causing restrictions in airspace (Middle East), rising fuel costs for airlines and possible fluctuations in demand. These can have a dampening effect on aircraft deliveries in the short term, without fundamentally changing the long-term growth prospects.

Efficiency enhancement program CORE shows lasting effect: The consistent execution of the efficiency enhancement program CORE, which has been implemented since autumn 2024, shows significant progress. The EBIT margin improved from 1.9% to 3.7% in the first quarter. At the same time, it was possible to manage the increase in personnel efficiently – revenue is increasing significantly faster than the increase in the number of employees in the operational area.

The Group's financial position also developed positively as planned: a strengthened equity ratio, reduced net debt and positive operating cash flow increase financial flexibility and create a stable basis for future growth.

Outlook for 2026 confirmed: Current customer orders confirm management's growth forecasts – despite selective adjustments as a result of geopolitical developments and ongoing bottlenecks in

some supply chains. FACC therefore confirms its outlook for the 2026 financial year and continues to expect revenue growth in the range of 5% to 15% as well as a further improvement in operating profit (EBIT). The comparatively broad forecast range reflects the continuing high level of volatility and uncertainty in the global environment, especially in connection with developments in the Middle East.

About FACC

FACC is a worldwide leading aerospace company in design, development and production of aerospace technologies and advanced aircraft lightweight systems. Being the technology partner of all major manufacturers, FACC works together with its customers on solutions for the aviation industry as well as on applications for passenger and logistics drones. Every second, there is an aircraft taking off with FACC technology on board. In the fiscal year 2025, FACC achieved EUR 984.4 million in revenue. More than 3,900 people from +50 nations are employed at 15 international locations worldwide. The company is listed on the Vienna Stock Exchange.
